Washington's 2004 Feed and Malting Barley Planted Acres Continues Decline Total Barley Acreage Lowest since 1974

Planted Acreage

Barley acreage planted for the 2004 crop year is estimated at 290,000 acres, 30,000 acres less than in 2003 and 60,000 acres below the 2002 crop. This is the fewest acres seeded for barley since 1974's 283,000 planted acreage. The eastern portion of the State accounted for 97 percent of the total in 2004.

Feed Barley

Feed barley accounted for 86 percent of the total barley planted for harvest in 2004 compared with 85 percent in 2003. Planted acreage in 2004 is a reported 250,000 acres, 23,000 acres below 2003. Baroness, continued to well exceed all other varieties, reaching 211,500 acres in 2004, or 85 percent of the total. This was 5 percentage points ahead of last year and represented 73 percent of all barley. Rounding out the top five varieties were Camelot, at 8,800 acres, Xena with 4,900 acres, Gallatin at 4,600 acres and Bob with 3,800 acres. These five varieties accounted for 93 percent of all feed barley and 81 percent of total barley.

Malting Barley

Malting barley planted acres, at 40,000 is 7,000 below 2003 and 22,000 acres fewer than in 2002. This is 14 percent of the total barley acreage compared with 15 percent in 2003 and 18 percent two years ago. AC Metcalf, at 37 percent of the total malting barley, was up 3,800 acres from last year. CDC Stratus was in second place with 7,500 acres followed by Harrington, Legacy, and Merit. These five accounted for 93 percent of the total malting barley planted for 2004. In Washington, malting barley is used for both livestock feed and human consumption.

Conclusion

The 2004 Barley Variety Survey was conducted as a non-probability survey in conjunction with the 2004 Wheat Variety Survey. The data were collected by mail, phone, and personal interviews from barley and wheat growers through the months of April, May, and June. Over 700 reports were collected from barley growers and summarized with acreage totaling 156,971 acres, accounting for 54 percent of the State's barley acreage. Barley types and varieties were estimated at the State and district levels. At either level, any estimate with less than three reports was moved into the "Other Varieties" category to avoid any possible disclosure of individual operations. For some varieties, the sum of the districts may be less than the State total due to this procedure. The sum of the district estimates for the "Other Varieties" category is also greater than the State level "Other Varieties" estimate for this same reason.

Thanks are given to all of the Washington producers who voluntarily provided the information that made these estimates possible.

Funding for the 2004 Barley Variety Survey was provided by the American Malting Barley Association, Inc. and the Washington Barley Commission.
